

# Community Engagement Workbook

## **Community Participation**

A process that involves community members as active representatives in both the decision-making and policy development processes of their society. Participation promotes action, which may lead to change (CDC, 1997).

# INTRODUCTION

“Knowledge which is unable to support action is not genuine.”

-Rudolph Virchow 1879

The concept of community has different meanings. Community may be about a shared place. It may be about people who have common interests or experiences and community may be about people living, working, and playing in that shared place.

The ability to participate in a community happens at many different levels. It happens when a family goes shopping or to the movies. It happens when a person who is sick goes to see his doctor. It happens when a student gets on the city bus to take a class at the community college. It happens when a worker heads off to the office in the morning and home again in the evening, and it happens when a group of concerned citizens attend a neighborhood meeting to voice their concerns.

The ability to participate in their communities contributes to the physical, emotional, and spiritual well-being of the community members. However, among people with disabilities participation in community life is a different experience. People with disabilities have fewer opportunities to participate in their communities. And when they do participate, they report less satisfaction in comparison to people without disabilities (Kinne, Patrick, & Doyle, 2004; US DHHS, 2001; NOD/Harris, 1994, 2000).

## Purpose

The purpose of Community Engagement Initiative is to bring together people from the disability community and community leaders to develop opportunities for new relationships and ongoing dialogue. These new working relationships can lead to changes that benefit everybody.
